

Deploying Your Model

If you want to deploy your deep learning model to a CPU, GPU, or other hardware device, there are many MATLAB tools you can use, including MATLAB Coder and GPU Coder.

We do not cover deployment in this specialization, but here are some resources that can help you get started:

- [Introduction to Code Generation](#) documentation
- Short video on "[What Is GPU Coder?](#)
- Video on "[Deploying Deep Neural Networks to GPUs and CPUs using MATLAB Coder and GPU Coder](#)
- Video on "[Deploying Deep Learning on Embedded Devices](#)
