1. What should be your first step when starting a deep learning project?

1 / 1 point

- ☐ Find dataset outliers by analyzing your data.
- ☒ Think about your goal, including what approach to take and target prediction speeds and metrics.
- ☐ Choose a model backbone based on target prediction speeds.

✔ Correct
Taking some time to carefully consider your goal should always be the first step of your deep learning development process.

2. If you need additional variation in your data, but you cannot collect more images, which of the following techniques should you try?

1 / 1 point

- ☐ Image resizing
- ☐ Model-assisted labeling
- ☒ Data augmentation

✔ Correct
This is a quick and powerful way to add more artificial variation to your data.

3. Which of the following is not a consideration for choosing a model backbone?

1 / 1 point

- ☐ Your available computational resources
- ☐ Your application's required accuracy
- ☒ Whether your dataset contains validation data

✔ Correct
You should always include validation data, no matter which backbone you use.

4. If your model has completed training but its loss on the test data is higher than your application demands, which of the following strategies might improve it?

1 / 1 point

- ☐ Optimize hyperparameters
- ☐ Add more data
- ☐ Re-build the model with a different backbone
- ☒ All of the above

✔ Correct
The Experiment Manager app is a great way to train and compare multiple models.

5. True or false: You need to use code to import a PyTorch model into MATLAB.

1 / 1 point

- ☐ True
- ☒ False

✔ Correct
You can also use the Deep Network Designer app to import third party models into MATLAB.

6. How can you share your MATLAB code with a colleague using a device that doesn't run MATLAB?

1 / 1 point

- ☐ Use a source control repository to integrate updates to your MATLAB code.
- ☐ Export the comments from your MATLAB code to make converting your code to another language faster.
- ☒ Use MATLAB code generation to deploy MATLAB to the language your colleague's device uses.

✔ Correct
MATLAB provides flexible, two-way integration with several languages.
