

Importing and Exporting from Third Party Platforms

MATLAB supports a growing amount of interoperability with other common platforms used for deep learning.

If you need to import a deep learning model from a third party platform, like **PyTorch** or **TensorFlow**, remember that you can use either code or the Deep Network Designer App. You can also use code to export a MATLAB model to another platform.

For the most up-to-date information on supported workflows, check out [this documentation page](#)

For more information on supported layer types and how different layers are converted, refer to the following documentation pages:

- [Importing a network from TensorFlow](#)
- [Importing a network from PyTorch](#)
- [Importing a network from ONNX](#)
- [Exporting a network to TensorFlow](#)
- [Exporting a network to ONNX](#)
