Using Object Detection Models

Meet Your Instructors

Welcome to the Deep Learning for Computer Vision specialization. We're excited you're here to gain skills in this rapidly expanding field.

You'll see and hear some of us in the videos, but everyone below developed examples, quizzes, and content to help you learn about computer vision. We had a lot of fun building this course, and we hope you'll find the material useful in your career. If you get stuck, just post your question on the forums. Good luck!

Megan Thompson earned her Ph.D. in bioengineering from the University of California at Berkeley and San Francisco in 2018. As a medical imaging research scientist, she used image processing and computer vision to study concussions in football, dementia, schizophrenia, and more. Now, at MathWorks, she designs and supports MATLAB-based online courses to help others analyze data and chase their own answers.

Matt Rich holds a Ph.D. and M.S. in Electrical Engineering from Iowa State University. His Ph.D. research developed new methods to design control systems over networks with communication interrupted by random processes. His M.S. research focused on system identification and robust control methods for small UAVs with uncertain physical parameters. Prior to his current role, he worked supporting MathWorks' Model-Based Design tools in industry and academia.

Amanda Wang has B.S. in Mathematics and a B.S. in Business Analytics from MIT. She also has a M.S. in Computer Science with an emphasis in Data Science from the University of Illinois Urbana-Champaign. Amanda has been developing MATLAB-based courses in a variety of fields, including image processing, computer vision, and deep learning since 2021.

Mehdi Alemi is a Senior Online Course Developer at MathWorks. He earned his Ph.D. in Mechanical Engineering from Virginia Tech in 2019. Before joining MathWorks, he was an NIH postdoctoral research fellow in the Department of Orthopedic Surgery at Harvard Medical School. His research focused on assistive robotics, exoskeletons, and advanced biomechanical design, modeling, and evaluation of assistive devices, resulting in over 1000 citations.

Brandon Armstrong is a Senior Team Lead in Training Services at MathWorks. He earned a Ph.D. in physics from the University of California at Santa Barbara in 2010. His research in magnetic resonance has been cited over 1000 times, and he is a co-inventor on 4 patents. He took and labeled many of the images you'll use in this specialization and encourages you to acquire and label your own data to practice!
