Instructions

1. How many EV signs are in the training data?

1 / 1 point

Try again

223

Correct

Our ground truth had 223 EV signs.

2. How many images contain an object labeled Accessible?

1 / 1 point

144

Correct

Yes, 144 of the 400 images have an Accessible sign.

3. Which class has the fewest number of objects in the training data?

1 / 1 point

Accessible

Charger

EV

Correct

The Charger class has the fewest number of objects and images in the training data.

4. Which class has the biggest range of object aspect ratios in the training data?

1 / 1 point

Accessible

Charger

EV

Correct

The aspect ratios range from about 0.5 to 4 for the Accessible class.

5. Examine the distribution of object areas for each class in the training data. Which class has the most Area outliers?

1 / 1 point

Accessible

Charger

EV

Correct

Most of the Accessible images are smaller posted signs. The painted signs on the ground are much larger and make up most of the outliers.

6. Based on your analysis of the training data, which class is the detector most likely to struggle with?

1 / 1 point

Accessible

Charger

EV

Correct

This class has the widest range of areas and aspect ratios. It also has the most outliers. Deep learning models are good at handling complex data if there are many images. A model might struggle to capture the range of objects for this class without more data.
