

What's Next?

Great work reaching the end of this course. You've now trained classification and detection models.
[Join us in course 3](#)  to learn advanced techniques and new types of models for anomaly detection. You'll learn to:

- train anomaly detection models
- use data augmentation to generate synthetic training images
- use model-assisted labeling to automatically label images for training.

So, head to [course three](#)  to complete this specialization and improve your deep learning for computer vision skills!
