Things of Note for Programming Assignments

This course has a mix of an auto-graded Jupyter notebook, a Jupyter notebook assignment marked as ungraded because the points come from the Peer Review and three Kaggle Peer Review mini-projects.

For the auto-graded assignment:

Grading

The final score that you will receive for your programming assignment is generated in relation to the total points set in your programming assignment item—not the total point value in the **nbgrader**

Jupyter notebook.

When calculating the final score shown to learners, the programming assignment takes the percentage of earned points vs. the total points provided by nbgrader and returns a score matching the equivalent percentage of the point value for the programming assignment.

DO NOT CHANGE VARIABLE OR METHOD SIGNATURES: The autograder will not work properly if you change the variable or method signatures.

Validate Button

Please note that this assignment uses nbgrader to facilitate grading. You will see a **validate button** at the top of your Jupyter notebook. If you hit this button, it will run tests cases for the lab that aren't hidden. It is good to use the validate button before submitting the lab. Do know that the labs in the course contain hidden test cases. The validate button will not let you know whether these test cases pass. After submitting your lab, you can see more information about these hidden test cases in the Grader Output.

Cells with longer execution times will cause the validate button to time out and freeze. Please know that if you run into Validate time-outs, it will not affect the final submission grading.

For the ungraded assignment with Peer Review: The Jupyter notebook shows as ungraded.

However, to answer the questions in the Peer Review, you need to complete the Jupyter notebook. It is still advised to not change variable or method signatures. You can still complete the assignment in-browser. ***For ungraded labs, there isn't a Submit or Validate button.***

For the Kaggle mini-projects: Follow the rubric and mini-project directions to prepare the deliverables.
