

Word2Vec Gender Bias Explorer

doctors, engineers, nurses and chefs

Update

How does this work?

This tool is based on the paper [Man is to Computer Programmer as Woman is to Homemaker? Debiasing Word Embeddings](#), and uses pretrained word embeddings from the [Google News word2vec dataset](#). It works by looking at differences between male and female word pairs like "he" and "she", or "boy" and "girl", and then comparing the differences between those words to other word vectors in the word2vec dataset.

This code is all wrong!

If you think there's a mistake in the way this is coded, or if you have ideas for improvement or want to collaborate, please open an issue or make a pull request on the [Github repo](#). Contributions are very welcome :)
