

librosa

`librosa` is a python package for music and audio analysis. It provides the building blocks necessary to create music information retrieval systems.

For a quick introduction to using librosa, please refer to the [Tutorial](#). For a more advanced introduction which describes the package design principles, please refer to the [librosa paper](#) at [SciPy 2015](#).

Citing librosa

If you want to cite librosa in a scholarly work, there are two ways to do it.

- If you are using the library for your work, for the sake of reproducibility, please cite the version you used by retrieving the appropriate DOI and citation information from Zenodo:

DOI: [10.5281/zenodo.14851534](https://doi.org/10.5281/zenodo.14851534)

- If you wish to cite librosa for its design, motivation etc., please cite the paper published at SciPy 2015. ¹
