1. Which accuracy metric is used to evaluate the balance between precision and recall in object detection?

1 / 1 point

- ☒ F1 Score
- ☐ True Positive Rate
- ☐ Mean Average Precision
- ☐ False Negative Rate

✔ Correct
Correct! The F1 Score is used to evaluate the balance between precision and recall in object detection.

2. What is a significant advantage of using YOLO (You Only Look Once) for object detection?

1 / 1 point

- ☐ Multi-label classification
- ☐ High image resolution
- ☒ Real-time processing capability
- ☐ Advanced image segmentation

✔ Correct
Correct! YOLO is known for its real-time processing capability, which is a significant advantage.

3. Which of the following are object detection algorithms that can be compared with YOLO?

1 / 1 point

☒ Fast R-CNN

✔ Correct
Correct! Fast R-CNN is an object detection algorithm that can be compared with YOLO.

☒ Faster R-CNN

✔ Correct
Correct! Faster R-CNN is another object detection algorithm that can be compared with YOLO.

☒ SSD (Single Shot MultiBox Detector)

✔ Correct
Correct! SSD is an object detection algorithm that can be compared with YOLO.

☐ ResNet

☐ AlexNet

4. What is the main goal when balancing content and style loss in style transfer?

1 / 1 point

- ☐ To eliminate noise from the output image
- ☒ To achieve a harmonious blend of content structure and artistic style
- ☐ To increase the sharpness of the output image
- ☐ To reduce the computational cost of the style transfer process

✔ Correct
Correct! Balancing content and style loss ensures that the output image maintains the content's structure while adopting the desired style.

5. In the context of style transfer, what does adjusting the style weight primarily affect?

1 / 1 point

- ☐ The resolution of the output image
- ☒ The prominence of stylistic features in the output image
- ☐ The color balance of the output image
- ☐ The training time required for the model

✔ Correct
Correct! Adjusting the style weight changes how much the stylistic features influence the final image.
