Control flow and conditionals

- ✓

Video: Math and logical operators
7 min
- ✓

Video: Control flow: If / else, else if
6 min
- ✓

Reading: Conditional statements
15 min
- ✓

Video: Switch statement
6 min
- ✓

Video: Looping constructs
5 min
- ✓

Reading: Looping Constructs: Practical Examples
5 min
- ✓

Reading: Practicing control flow and loops
5 min
- ✓

Video: Nested loops and the effect on algorithmic complexity
5 min
- ✓

Reading: Exercise: Use control flow and loops to solve a problem
30 min
- ✓

Reading: Use control flow and loops to solve a problem - solution
10 min
- 📖

Practice Quiz: Self-review: Use control flow and loops to solve a problem
3 questions
- ▶

Video: Module summary: Getting started with Python
1 min
- 📖

Quiz: Module quiz: Getting started with Python
10 questions
- 📖

Reading: Additional resources
5 min

Use control flow and loops to solve a problem - solution

Solution Code

Step 1

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 for num in num_list:
4     print(num)
```

Run

Reset

Step 2

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 for num in num_list:
4     if num > 45:
5         print(num)
```

Run

Reset

Step 3

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 for num in num_list:
4     if num > 45:
5         print('Over 45')
6     else:
7         print('Under 45')
```

Run

Reset

Step 4

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 for x,num in enumerate(num_list):
4     if num == 36:
5         print('Number found at ', x)
6
7
```

Run

Reset

Step 5,6,7

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 count = 0
4
5 for x,num in enumerate(num_list):
6     count += 1
7     if num == 36:
8         print('Number found at ', x)
9
10 print(count)
11
```

Run

Reset

Step 8

```
1 num_list = [33,42,5,66,77,22,16,79,36,62,78,43,88,39,53,67,89,11]
2
3 count = 0
4
5 for x,num in enumerate(num_list):
6     count += 1
7     if num == 36:
8         print('Number found at ', x)
9         break
10
11 print(count)
12
```

Run

Reset
