Define a Class - solution

Solution code

```
1 class House:
2     '''
3     This is a stub for a class representing a house that can be used to create objects and evaluate different metrics th
4     '''
5     num_rooms = 5
6     bathrooms = 2
7
8     def cost_evaluation(self, rate):
9         # Functionality to calculate the costs from the area of the house
10        cost = rate * self.num_rooms
11        return cost
12
13
14
15 house = House()
16 print(house.num_rooms)
17 print(House.num_rooms)
18 house.num_rooms = 7
19 # House.num_rooms = 7
20 print(house.num_rooms)
21 print(House.num_rooms)
```

Run

Reset

```
5
5
7
5
```
