10.4.R1 (1/1 point)

True or False: If we cut the dendrogram at a lower point, we will tend to get more clusters (and cannot get fewer clusters).

- ☒ True ✓
- ☐ False

EXPLANATION

After cutting the dendrogram at threshold t , we keep all the joins with linkage distance less than t and discard the joins with larger linkage distance. Thus, decreasing the threshold gives us fewer joins, and thus more clusters. If, in decreasing the threshold, we don't cross a junction of the dendrogram, the number of clusters will remain the same.
