2.Q.1 (1/1 point)

For each of the following parts, indicate whether we would generally expect the performance of a flexible statistical learning method to be better or worse than an inflexible model.

The sample size n is extremely large, and the number of predictors p is small:

Flexible is better ▾ Flexible is better

EXPLANATION

A flexible model will allow us to take full advantage of our large sample size.

Hide Answer

You have used 1 of 5 submissions

2.Q.2 (1/1 point)

The number of predictors p is extremely large, and the sample size n is small:

Flexible is worse ▾ Flexible is worse

EXPLANATION

The flexible model will cause overfitting due to our small sample size.

Hide Answer

You have used 1 of 5 submissions

2.Q.3 (1/1 point)

The relationship between the predictors and response is highly non-linear:

Flexible is better ▾ Flexible is better

EXPLANATION

A flexible model will be necessary to find the nonlinear effect.

Hide Answer

You have used 1 of 5 submissions

2.Q.4 (1/1 point)

The variance of the error terms, i.e. $\sigma^2 = \text{Var}(\epsilon)$, is extremely high:

Flexible is worse ▾ Flexible is worse

EXPLANATION

A flexible model will cause us to fit too much of the noise in the problem.

Hide Answer

You have used 1 of 5 submissions
