4.Q.1 (1/1 point)

Which of the following tools would be well suited for predicting if a student will get an A in a class based on the student's height, and parents' income? Select all that apply:

- ☒ Linear Discriminant Analysis ✓
- ☐ Linear Regression
- ☒ Logistic Regression ✓
- ☐ Random Guess

EXPLANATION

Whether or not a student gets an A is a categorical variables. Thus, we should use a classification technique like LDA or Logistic Regression.
