5.5.R1 (1/1 point)

If we have n data points, what is the probability that a given data point does not appear in a bootstrap sample?

$$\left(1 - \frac{1}{n}\right)^n$$

Answer: $(1-1/n)^n$ **EXPLANATION**

To construct a bootstrap sample, we repeatedly draw a single data point from a sample of size n , n times. Any given data point has a $1-1/n$ chance of not being selected in each draw. Hence, the chance of not being selected in any of the n draws is $(1-1/n)^n$
