6.2.R1 (1/1 point)

We perform best subset and forward stepwise selection on a single dataset. For both approaches, we obtain $p + 1$ models, containing $0, 1, 2, \dots, p$ predictors.

Which of the two models with k predictors is guaranteed to have training RSS no larger than the other model?

- ☒ Best Subset ✓
- ☐ Forward Stepwise
- ☐ They always have the same training RSS
- ☐ Not enough information is given to know

[Hide Answer](#)*You have used 1 of 5 submissions*

6.2.R2 (1/1 point)

Which of the two models with k predictors has the smallest test RSS?

- ☐ Best Subset
- ☐ Forward Stepwise
- ☐ They always have the same test RSS
- ☒ Not enough information is given to know ✓

EXPLANATION

We know that Best Subset selection will always have the lowest training RSS (that is how it is defined). That said, we don't know which model will perform better on a test set.
