8.2.R1 (1/1 point)

Imagine that you are doing cost complexity pruning as defined on page 18 of the notes. You fit two trees, T_1 is fit at $\alpha = 1$ and T_2 is fit at $\alpha = 2$. Which of the following is true?

- ☒ T_1 will have at least as many nodes as T_2 ✓
- ☐ T_1 will have at most as many nodes as T_2
- ☐ Not enough information is given in the problem to decide

EXPLANATION

A higher value of *alpha* corresponds to a higher penalty on the complexity of the tree. This means that T_1 will have at least as many nodes as T_2 .
