Course Curriculum

Certification

Module 1

Introduction to Data Science

Learning Objectives:

In this module will get an understanding of Big Data and You will learn how Hadoop and R are used in Big Data A in the Analysis. This Module will also cover common Big I available methods in Data Science to solve these proble

Topics:

Introduction to Big Data, Roles played by a Data Scientis Methodologies used for analysis, the Architecture and M problems, For example, Data Acquisition from various so using Map Reduce (RMR) , Application of Machine Lear problem statement of few data science problems which w real-life data sets a Data Scientist encounter in his day to

Module 2

Data Acquisition and Ingestion, and Data Cleansing

Learning Objectives:

In this module will get an understanding of Data Acquisition. This module covers these aspects for both Hadoop and I

Topics:

Learn about Data sources, Data loading techniques (Direct and other Hadoop Data Loading Techniques), handling CSV, JSON, Audio, Video etc., removing anomalies, incorrect,

Module 3

Machine Learning Techniques Using R Part-1

Learning Objectives:

In this module you will learn Supervised and Unsupervised Learning algorithms.

Topics:

Creating predictive models, Supervised and Unsupervised techniques including Clustering and Association rule min

Module 4

Machine Learning Techniques Using R Part-2

Learning Objectives:

In this module you will learn additional Machine Learning

Topics:

Classification Techniques including Random Forest and linear and logistic regression.

Module 5

Machine Learning using Mahout Libraries on Hadoop

Learning Objectives:

In this module we will understand few of the in-built Mahout.

Topics:

K-Means Clustering, Association Rule Mining, Finding co Random Forest Decision Tree based Classifier.

Module 6

Integrating R with Hadoop

Part-1

Learning Objectives:

In this module you will learn the methods to integrate two p analytics, R and Hadoop.

Topics:

Integrating R with Hadoop using RHadoop and RMR pack (Programming Environment).

Module 7

Integrating R with Hadoop

Part-2

Learning Objectives:

This module will learn technique to write your own Mapper you understand how to achieve Parallel Processing for fe

Topics:

Writing MapReduce Jobs in R and MapReduce Job Exec Classifier run using parallel Processing Library in R.

Module 8

Analysis: Visualisation and Communication

Learning Objectives:

In this module you will learn data visualisation packages :

Topics:

Visualization Packages in R

- Google Visualization Package in R
- D3 Visualization Package in Hadoop
- Results Visualization on Google Map etc.
- Results Visualization on the chosen Project Data Set fo
