Practice Learning Check - Intro to Search Problems

Instructions

Review Learning Objectives

1. What is the process of looking for a sequence of actions that reaches the goal called?

1 / 1 point

- ☐ The agent function
- ☐ The agent program
- ☒ The search problem
- ☐ The shortest path

Correct

This is the definition of the search problem. The actual sequence of actions is called a solution.

Submitted: Sep 23, 1:28 AM (EST) Attempts: 4/6 (5 attempts every 24 hours)

Try again

2. Which of the following statements are true? Select all that apply.

1 / 1 point

- ☐ There is only one solution to a problem from the initial state to the goal state.
- ☒ Path cost is a necessary component of a search problem.

View submission

See feedback

Correct

A performance measure used to compare paths. Typically look to minimize this value.

- ☒ A solution is a sequence of actions from the initial state to a goal state.

Like Dislike Report an issue

- ☒ Correct

True. This is the definition of a solution

- ☐ Search problems are limited to two actions, like (on/off, up/down, move/stay)

3. Number of moves, sum of distance, and travel time are all possible values of which search problem component?

1 / 1 point

- ☐ Initial state
- ☐ Transition model
- ☐ Abstraction
- ☒ Performance measure

Correct

Those are examples of ways to measure path costs of various solutions.
