4/2 What is an interest Point? Self-check

Quiz

1. What are the attributes of an interest point?

☒ It has a rich local appearance.

☒ It has a well defined neighbourhood.

☐ It is easier to find in the image.

☒ It has a well defined position.

☐ It is sensitive to light variations.

Correct

Really to review what you've learned before starting the assignment? I'm here to help.

☒ Do the practice

2. Why are the lines of the **cup** not an **interest point** in the image below?

☒ They are computations.

☒ They are not unique.

☒ They change with variation in the angle of the image.

☒ They have different local appearance.

Correct

The edges and lines have similar local appearance and are not unique enough to be counted as interesting points.

3. Can blobs be used as interest points?

☒ Yes

☐ No

Correct

Blobs can be used as interest points because blobs have fixed positions and definite sizes and may have some interesting appearance within them.
