Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

4.3 Detecting Blobs Self-check Quiz

1. Why is it better to use the second derivative of the Gaussian to detect blobs? **1 / 1 point**

- Computationally inexpensive.
- Allows us to find the location of the blob.
- Smoothens the input noisy signal.
- All of the above.

Correct
The Gaussian helps us localizating the blob position.

2. Characteristics scale is proportional to the size of the blob. **1 / 1 point**

Determine if the above statement is True/False?

- True
- False

Correct
To get the precise position of the blob we change the sigma of the Gaussian. The bigger the blob the higher the sigma value.

Like Dislike Report an issue

3. In which of the following cases the blob would not be detected. **1 / 1 point**

- At edges and corners.
- Flat surfaces with no variations.
- Lines in the image.
- All of the above.

Correct
Please refer to lecture video.
