Highly active question

You have enough reputation to answer or unprotect this question.

I have noticed that some newer TensorFlow versions are incompatible with older CUDA and cuDNN versions. Does an overview of the compatible versions or even a list of officially tested combinations exist? I can't find it in the TensorFlow documentation.

tensorflow

cuda

version

compatibility

The question was addressing compatibility and (officially) tested combinations which, in my view, are not provided in the instructions for installation. Also, I cannot find the section you're referring to. These observations result in my overall view that the requested information is hard to find and therefore justifies providing easy access to the link posted in the answer. – whiletrue May 31, 2018 at 11:44

You will find that the CUDA and cuDNN versions on the page you mention match the one of the installation instructions. – P-Gn May 31, 2018 at 11:46

The section you're referring to just gives me the compatible version for CUDA and cuDNN --ONCE-- I have found out about my desired TensorFlow version. In the common case (for example in .edu lab environments) where CUDA and cuDNN are already installed but TF not, the necessity for an overview becomes apparent. My claim is that it's quite hidden and hard to find (I wasn't able to find it via googling). – whiletrue May 31, 2018 at 12:00

Oh I see what you mean -- trying to see which tensorflow version fits a particular CUDA/cuDNN combination. You could browse TF's release notes but the table you link to is indeed a good summary. – P-Gn May 31, 2018 at 13:15

Thanks for the first answer.

Something about backward compatibility.

I can successfully install tensorflow-2.4.0 with cuda-11.1 and cudnn 8.0.5.

GPU

Version	Python version	Compiler	Build tools	cuDNN	CUDA
tensorflow-2.8.0	3.7-3.10	GCC 7.3.1	Bazel 4.2.1	8.1	11.2
tensorflow-2.7.0	3.7-3.9	GCC 7.3.1	Bazel 3.7.2	8.1	11.2
tensorflow-2.6.0	3.6-3.9	GCC 7.3.1	Bazel 3.7.2	8.1	11.2
tensorflow-2.5.0	3.6-3.9	GCC 7.3.1	Bazel 3.7.2	8.1	11.2
tensorflow-2.4.0	3.6-3.8	GCC 7.3.1	Bazel 3.1.0	8.0	11.0

Hello, can you tell me where did you find this chart please? When I click on the link provided in the messages above the chart stops at TensorFlow 2.6... – Valentin Golditz Apr 22, 2022 at 12:31

This link is now broken :(– starbeamrainbowlabs May 9, 2024 at 11:49

TL;DR) See this table: <https://www.tensorflow.org/install/source#gpu>

Generally:

Check the CUDA version:

```
cat /usr/local/cuda/version.txt
```

and cuDNN version:

```
grep CUDNN_MAJOR -A 2 /usr/local/cuda/include/cudnn.h
```

and install a combination as given below in the images or [here](#).

The following images and the link provide an overview of the officially supported/tested combinations of CUDA and TensorFlow on Linux, macOS and Windows:

Minor configurations:

Since the given specifications below in some cases might be too broad, here is one specific configuration that works:

- tensorflow-gpu==1.12.0
- cuda==9.0
- cudnn==7.1.4

The corresponding cudnn can be downloaded [here](#).

Tested build configurations

Please refer to <https://www.tensorflow.org/install/source#gpu> for a up-to-date compatibility chart (for official TF wheels).

1 I did notice though that TensorFlow versions < 1.0 have been excluded from the overview. Does somebody have an idea where to find the same list for older versions?
- whiletrue May 31, 2018 at 10:49

3 Looks like they don't specify minor versions for cuda and cudnn, - mrgloom Nov 30, 2018 at 0:58

-4

This post is hidden. It was [deleted](#) 4 years ago by [Cody Gray](#).

This page is very helpful, is it further maintained, at all?

The reason I am asking is that I still I get the below error message when running a Python script that would run in previous environments:

```
Failed to load the native TensorFlow runtime.
```

As this article evolves around the various possible combinations of cuDNN, CUDA and Tensorflow, I was wondering if my below setup is known to be working:

- CUDA 10.2
- cuDNN 7.6.5
- tensorflow-gpu-2.2.0rc3
- Windows 10
- NVidia GeForce RTX 2070

What version of **Tensorflow support CUDA V10.2**

i installed **tensorflow 2.2.0-rc4** So i dont know the combination so **HELP** me to fix.

This post is hidden. It was [deleted](#) 4 years ago by [Samuel Liew](#).

I have installed

- tensorflow_gpu-2.2.0rc3
- CUDA 10.2
- cuDNN 7.6.5
- Windows 10

I get an error message "Failed to load the native TensorFlow runtime." on code that worked with TF1. This setup fails even on simple tests like this:

```
from tensorflow import *
```

So are there any updates to this wonderful compatibility list...?

user11530462

thank you for the update! Would it make sense to perhaps update my above post with your screenshots by placing them on top and my old screens on the bottom? I think the original answer is the most visible and should yield the most valuable information. Open for other ideas as well. - [whiletrue](#) Jan 13, 2020 at 15:48

For Linux, you can follow this from the installation guide of Nvidia:

Table 1. Native Linux Distribution Support in CUDA 10.1 Update 1							
Distribution	Kernel*	GCC	GLIBC	ICC	PGI	XLC	CLANG
x86_64							
RHEL 7.6	3.10	4.8.5	2.17	19.0	18.x, 19.x	NO	8.0.0
RHEL 6.10	2.6.32	4.4.7	2.12				
CentOS 7.6	3.10	4.8.5	2.17				
CentOS 6.10	2.6.32	4.4.7	2.12				
Fedora 29	4.16	8.0.1	2.27				
OpenSUSE Leap 15.0	4.15.0	7.3.1	2.26				
SLES 15.0	4.12.14	7.2.1	2.26				
SLES 12.4	4.12.14	4.8.5	2.22				
Ubuntu 18.10	4.18.0	8.2.0	2.28				
Ubuntu 18.04.2 (**)	4.15.0	7.3.0	2.27				
Ubuntu 16.04.6 (**)	4.4	5.4.0	2.23	—	—	—	—
Ubuntu 14.04.6 (**)	3.13	4.8.4	2.19				
POWER8(***)							
RHEL 7.6	3.10	4.8.5	2.17	NO	18.x, 19.x	13.1.x, 16.1.x	8.0.0
Ubuntu 18.04.1	4.15.0	7.3.0	2.27	NO	18.x, 19.x	13.1.x, 16.1.x	8.0.0
POWER9(****)							
Ubuntu 18.04.1	4.15.0	7.3.0	2.27	NO	18.x, 19.x	13.1.x, 16.1.x	8.0.0
RHEL 7.6 IBM Power LE	4.14.0	4.8.5	2.17	NO	18.x, 19.x	13.1.x, 16.1.x	8.0.0

3,375 1 25 40

 this does not answer the question since there's no word lost about TensorFlow – [whiletrue](#) Jun 29, 2019 at 13:10
