

I think you should downgrade python version to 3.9 and using `conda install tensorflow-gpu`

2  If I run this command I get The "tensorflow-gpu" package has been removed! Please install "tensorflow" instead. - Szymon Roziewski Jul 5, 2023 at 12:37

1

```
cuda_11.2.0_460.89_win10
cudnn-11.2-windows-x64-v8.1.0.77
conda create --name cuda37 python=3.7
pip install tensorflow-gpu==2.6.0
pip install keras==2.6.0
```

Dont forgot about add env.

it works, I don't have time, so it stays but if someone knows how to do it on the latest versions, it may be useful to someone

 Does `conda create --name tf python=3.10 pip` followed by `conda activate tf` and `pip install tensorflow==2.12` not work? - FlyingTeller May 3, 2023 at 9:33

-1

 This post is hidden. It was deleted 3 months ago by starball, desertnaut, Mark Rotteveel.

The !pip install tensorflow-gpu and tf-nightly-gpu were removed from tensorflow v2.12. We can directly use pip install tensorflow for the gpu. <https://pypi.org/project/tensorflow-gpu/> Thank you!
