1. Which installation command is correct for Theano without GPU support?

1 / 1 point

- ☐

pip install theano-gpu
- ☐

pip install theano
- ☒

conda install theano
- ☐

conda install theano-pygpu
- ✔

Correct

Correct! 'conda install theano' is used for CPU only installation.

2. What is a benefit of using Anaconda for Python package installations?

1 / 1 point

- ☐

It is the only option for installing Python on Windows.
- ☐

It only supports Python 2.
- ☐

It provides a graphical user interface exclusively for Python scripts.
- ☒

It isolates your environment from system defaults.
- ✔

Correct

Correct! Anaconda allows the isolation of environments, which simplifies managing dependencies.

3. Why is Ubuntu recommended for virtual machines in development environments?

1 / 1 point

- ☐

It requires the maximum system resources.
- ☐

Ubuntu is not compatible with Python development tools.
- ☒

It provides a lightweight and efficient solution for virtual machines.
- ☐

It is the only Linux distribution available.
- ✔

Correct

Correct! Ubuntu is efficient in resource usage, making it ideal for virtual machines.

4. Why use a virtual machine for setting up a development environment on Windows?

1 / 1 point

- ☐

They make Windows more consumer-friendly.
- ☐

They improve Windows performance significantly.
- ☒

They allow running Linux environments on Windows easily.
- ☐

They prevent any software installation issues.
- ✔

Correct

Correct! Virtual machines help run Linux environments on Windows, which is beneficial for development.

5. What is a key advantage of using Linux for Python development compared to Windows?

1 / 1 point

- ☒

Linux tends to face fewer library compatibility issues.
- ☐

Linux does not support Python 3.
- ☐

Linux systems can be installed on any hardware for free.
- ☐

Linux offers a graphical user interface exclusively for Python development.
- ✔

Correct

Correct! Linux generally encounters fewer compatibility issues with scientific and development libraries.
