Your latest: 100% • Your highest: 100% • To pass you need at least 50%. We keep your highest score.

1. What technique is invaluable for debugging scripts in Python according to best practices discussed?

1 / 1 point

- ☐ Minimizing code length
- ☒ Using the print() function to show outputs
- ☐ Maximizing code comments
- ☐ Writing unit tests

✔ **Correct**
Correct! Printing debug information is widely endorsed for insight.

2. Why is it advantageous to write self-contained Python files instead of fully relying on interactive environments like Jupyter Notebooks?

1 / 1 point

- ☐ They are more secure by default
- ☐ They automatically optimize code
- ☒ They are executable outside of notebook environments
- ☐ They require less memory

✔ **Correct**
Correct! Self-contained scripts run independently, facilitating broader application use.

3. Why is coding alone, as opposed to coding along with instructions, emphasized in learning software development?

1 / 1 point

- ☐ It discourages collaboration
- ☐ It ensures perfection
- ☒ It builds independent problem-solving skills
- ☐ It saves time

✔ **Correct**
Correct! Independent coding promotes better problem-solving and understanding.

4. How does using the print function help when coding in scripting environments like Python?

1 / 1 point

- ☐ By executing commands faster
- ☐ By securing the code
- ☐ By formatting outputs
- ☒ By displaying intermediate values during execution

✔ **Correct**
Correct! Printing intermediate values helps trace code execution.

5. What is the key advantage of using modular programming in software development?

1 / 1 point

- ☐ Automatic error checking
- ☐ Faster execution
- ☒ Enhanced code readability and maintenance
- ☐ Decreased memory usage

✔ **Correct**
Correct! Modular code is easier to read, maintain, and update.
