Your latest: 100% • Your highest: 100% • To pass you need at least 50%. We keep your highest score.

1.

What can Generative Adversarial Networks (GANs) do that wasn't possible before their development?

1 / 1 point

☐

Accurate weather predictions

☐

Efficient speech recognition

☒

Realistic image generation

☐

Predicting stock market trends

✔

Correct

Correct! GANs can create images that look convincingly real, a groundbreaking development.
2.

Why is it important to understand neurons before building neural networks?

1 / 1 point

☐

Neurons are used in regression models

☐

Neurons enable faster GPU computation

☒

Neurons are the basic units that form neural networks

☐

Neurons contain weights and biases needed for decision trees

✔

Correct

Correct! Neurons are the essential components that compose neural networks.
3.

Which of the following is an ensemble method discussed in the lecture?

1 / 1 point

☒

Random forests

☐

K-nearest neighbors

☐

Linear regression

☐

Support vector machines

✔

Correct

Correct! This method builds multiple decision trees and combines their outcomes.
4.

What is a foundational concept for both Bayesian machine learning and reinforcement learning?

1 / 1 point

☐

Bayesian priors

☒

Explore-exploit dilemma

☐

Backpropagation

☐

Gradient descent

✔

Correct

Correct! It is a key concept for decision making in variable conditions.
5.

Who are some experts that emphasize the importance of unsupervised deep learning?

1 / 1 point

☐

Sigmund Freud, Carl Jung, Ivan Pavlov

☐

Marie Curie, Albert Einstein, Isaac Newton

☒

Yann LeCun, Yoshua Bengio, Geoffrey Hinton

☐

Elon Musk, Steve Jobs, Bill Gates

✔

Correct

Correct! They are key figures in the field of deep learning.
