In the top-left pane, write code that will calculate and print the Cosine Similarity of the text from the webpage top Google search result of the `query` which is captured from keyboard input.

- Use the `googlesearch` library
- Use Python `requests` library
- Use `lxml`
- Use BeautifulSoup
- Use `CountVectorizer`
- Filter out punctuation
- Filter out stop words
- Ignore case
- Score by existence (i.e. `binary` scoring)

Test your code using the terminal in the bottom-left:

### Example Input/Output:

## exercise4

A solution:

Check It!

Check 1 passed

Check 2 passed
