Coding Exercise 1

In the top-left pane, write the code for a chatbot that uses `regex` and the `nltk` Chat utility and answers the following types of questions that are captured through keyboard input with the following responses:

- What is the weather like in (city) ?
- How was your day (today/yesterday/the day before) ?
- (Hi/Hey/Hello), how are you ?

• It's sweater weather!

• It was great! Thanks for asking!

• I'm good! How about you?

Make sure to:

- Use the `nltk` Chat utility that takes as input a list of tuples
- Each tuple in this list is: (`regex` pattern, response)

Test your code using the terminal in the bottom-left:

TRY IT

Example Input/Output:

What is the weather like in Boston?

It's sweater weather!

Submit your code for feedback by pressing the button below.

A solution:

```
pairs = [
    ('(.*)the weather(.*)', ['It\'s sweater weather!']),
    ('(.*)your day(.*)', ['It was great! Thanks for asking!']),
    ('(hi|hello|hey|howdy|hola), how are you(.*)', ['I\'m good! How about you?'])
]

chat = Chat(pairs)
chat.converse()
```

Note: The regex handles any city name entered, different ways that one can ask how someone's day was, and any greetings one can use before asking how someone's doing!

Check It!
