Coding Exercise 4

Coding Exercise 4

Problem

Remove all of the third-party packages found in the `ex4` virtual environment.

Activate `ex4` with the following command:

source ex4/bin/activate

Expected Output

List out the contents of the directory that stores all of the packages in the virtual environment:

ls ex4/lib/python3.6/site-packages

If you removed all of the third-party packages, you should see the following output:

easy_install.py pip-9.0.1.dist-info pkg_resources-0.0.0.dist-info setuptools
pip pkg_resources __pycache__ setuptools

Submit your code for evaluation.

Here is one possible solution:

1. Create a `requirements.txt` file with `pip freeze` to get a list of every third-party package installed in the `ex4` virtual environment.

python3 -m pip freeze > requirements.txt

2. Use the `requirements.txt` file to remove all of the third-party packages. The `-r` flag tells Python that this is a requirements file, and the `-y` flag means you do not have to enter `y` to confirm the removal of the package.

python3 -m pip uninstall -r requirements.txt -y

Check It!

LAST RUN on 7/25/2023, 1:40:29 AM

Check 1 passed
