Coding Exercise 5

Coding Exercise 5

Problem

Activate the `ex5` virtual environment:

source ex5/bin/activate

The package `my_package` already exists. Modify the `setup.py` file (top-left) to create a wheel for `my_package`. The author for the package are `"Calvin and Hobbes"`. This is also version 1 of `my_package`. After the `setup.py` file has been created, create a wheel for `my_package`.

Expected Output

Click the button below to run a script that prints out the wheel file and all of the metadata from the `my_package` wheel. You should see the following output:

Wheel: my_package-1.0-py3-none-any.whl
Name: my-package
Version: 1.0
Author: Calvin & Hobbes

CHECK METADATA

Wheel: my_package-1.0-py3-none-any.whl
Name: my-package
Version: 1.0
Author: Calvin & Hobbes

Submit your code for evaluation.

Here is how to create the `setup.py` file:

```
from setuptools import setup

setup(
    name='my_package',
    version='1.0',
    packages=['my_package'],
    author='Calvin & Hobbes'
)
```

To build the wheel, enter the following command in the terminal:

```
python3 setup.py sdist bdist_wheel
```

Check It!
