

Formative Assessment 1

Formative Assessment

Assume the following hierarchy:

```
baseball_stats
__init__.py
team_stats.py
batter_stats.py
pitching_stats.py
defense_stats.py
```

Is the above structure a module or a package?

☐ Module

☒ Package

The hierarchical structure is a package. First, this is a collection of Python files. A module is a hierarchical structure, but it is a collection of functions, classes, variables, etc. stored in a single Python file. A package is a collection of Python files in the same directory. The `__init__.py` file is used with packages and not modules.

Check It!
