

Formative Assessment 1

Fill in the blanks below.

- A **pure-Python** wheel is designed to run only on Python 2 or Python 3.
- A **universal** wheel is designed to run on both Python 2 and Python 3.
- A **platform** wheel is designed to run on a certain operating system or hardware.

Here are the correct answers:

- A **pure-Python** wheel is designed to run only on Python 2 or Python 3.
- A **universal** wheel is designed to run on both Python 2 and Python 3.
- A **platform** wheel is designed to run on a certain platform.

All wheels are a **Python** wheel as they are packages for Python. While **any** is used in the name of a wheel when it can work on any platform, it is not a type of wheel. There is no such wheel called a hybrid wheel.
