Coding Exercise 2

Coding Exercise 2

Problem

The poetry project `ex2` has already been created for you. In addition, several packages have already been installed. However, the following packages are out of date:

- `beautifulsoup4` is at version 4.9.3
- `fire` is at version 0.3
- `pygame` is at version 2.0.0
- `python-twitter` is at version 3.4

Update these packages to the *latest* version.

Expected Output

After updating the specified packages, run the following command.

```
poetry show | grep -E 'beautifulsoup4|fire|pygame|python-twitter'
```

This command extracts the information (name, version, and description) for the `beautifulsoup4`, `fire`, `pygame`, and `python-twitter` packages and prints it to the terminal. **Note**, you may see a version different than the numbers below. Your updated versions *do not* have to match. They need to be newer than the versions above.

beautifulsoup4	4.11.1	Screen-scraping library
fire	0.4.0	A library for automatically generating command line
pygame	2.1.2	Python Game Development
python-twitter	3.5	A Python wrapper around the Twitter API

Submit your code for evaluation.

The correct commands are:

```
poetry add beautifulsoup4@latest fire@latest pygame@latest python-twitte
```

Using the `upgrade` command will not work as the current version satisfies the parameters set forth in the `poetry.lock` file. Instead, use the `add` command followed by the package name and `@latest`. This will force Poetry to override the lock file and update to the latest version.

Check It!

LAST RUN on 7/25/2023, 2:00:28 PM

Check 1 passed

Check 2 passed

Check 3 passed

Check 4 passed
