Coding Exercise 3

Coding Exercise 3

Starting Conda

Even though you do not see `(base)` on the far left of the terminal prompt, Conda is already installed on this system. Before trying to solve the coding exercise, please start the `ex3` virtual environment.

```
conda activate ex3
```

Problem

A variety of packages have already been installed in the `ex3` virtual environment. Roll back to a previous revision such that `django` and `flask` are installed while `matplotlib` and `scipy` are not.

Expected Output

Run the following script. It counts the number of packages in the virtual environment as well as checks to see if you rolled back to a revision.

```
bash check_ex3.sh
```

You should see the following output:

```
Flask count: 1
Django count: 1
Scipy count: 0
Matplotlib count: 0
Revision count: 1
```

Submit your code for evaluation.

The correct command is:

```
conda install --revision 2
```

Look at all of the revisions for the virtual environment (`conda list -revisions`) you will see all the changes that happened over time. Any package prefaced with a `+` was installed, and any package prefaced with a `-` was removed. Revisions are cumulative; that means revision 2 contains its changes plus everything found in revision 1. Revision 3 contains its changes plus those in revision 2 and 1, etc.

Revisions 1 installs `flask` while revision 2 installs `django`. At this point, `matplotlib` and `scipy` have not been installed. Roll back to revision 2.

Check It!

LAST RUN on 7/25/2023, 2:13:10 PM

Check 1 **passed**

Check 2 **passed**

Check 3 **passed**

Check 4 **passed**

Check 5 **passed**
