Coding Exercise 4

Coding Exercise 4

Problem

The Poetry project `ex4` has already been created for you. Create a pure Python wheel that runs on any platform. You should not create a source distribution of the project.

Expected Output

After building your wheel, run the `tree` utility to see a graphical representation of `ex4`. The wheel (and only a wheel) should be located in the `dist` directory.

tree

You should see the following output:

```
.
├── dist
│   └── ex4-0.1.0-py3-none-any.whl
├── ex4
│   ├── __init__.py
│   ├── mod1.py
│   └── mod2.py
├── pyproject.toml
├── README.rst
└── tests
    ├── __init__.py
    └── test_ex4.py
```

If your output did not match the expected output, remove the `dist` directory and its contents before building another wheel. The command below will remove `dist`:

rm -r dist

Submit your code for evaluation.

The correct command is:

poetry build --format wheel

The `build` command alone will create a wheel and a source distribution. Since we want only a wheel, you need to use the `--format` flag with `wheel`. By default, Poetry builds a pure Python wheel that runs on any platform.

Check It!

LAST RUN on 7/25/2023, 2:19:06 PM

Check 1 passed
