Coding Exercise 5

Coding Exercise 5

Starting Conda

Even though you do not see `| (base) |` on the far left of the terminal prompt, Conda is already installed on this system. Before trying to solve the coding exercise, please start the `| base |` virtual environment.

conda activate base

Problem

Create the virtual environment `| ex5 |`. Then install the following packages:

- Python version 3.7
- Scipy
- Flask
- Matplotlib
- Python-Twitter

Finally, create a requirements file (named `| requirements.yaml |`) that has allows another user to install *all* packages from your virtual environment.

Expected Output

Once your virtual environment is properly set up and converted into a requirements file, run the script below to check your work.

bash check_ex5.sh

You should see the following output:

Created the ex5 virtual environment.
Created the requirements file.
Installed python-twitter package.
Installed flask package.
Installed scipy package.
Installed matplotlib package.
Installed Python version 3.7.

Submit your code for evaluation.

The commands needed to fulfill this coding exercise are as follows:

- Create the `| ex5 |` virtual environment and install several of the packages. Notice that version 3.7 specified when installing `| python |`. `| python-twitter |` was not installed at this time. The `| -y |` flag is not required, but it keeps you from having to confirm your decision.

conda create --name ex5 python=3.7 scipy flask matplotlib -y

- We still need to install and export the `| ex5 |` environment. Be sure to activate it so we do not alter the base environment.

conda activate ex5

- The `| python-twitter |` package is not available on Anaconda. Use `| pip |` instead to install it.

pip install python-twitter

- Export the entire virtual environment. Remember, using the `| --explicit |` tag to create a requirements file will not include any packages installed with `| pip |`. Instead use `| export |` to export all of the installed packages.

conda env export > requirements.yaml

Check It!

LAST RUN on 7/25/2023, 2:30:09 PM

Check 1 passed
Check 2 passed
Check 3 passed
Check 4 passed
Check 5 passed
