

Terminalx

```
(base) codio@ecologyopen-metrofantasy:~/workspace$ conda create -y --name update-env scipy matplotlib requests
Collecting package metadata (current_repodata.json): done
Solving environment: done

==> WARNING: A newer version of conda exists. <==
  current version: 4.12.0
  latest version: 23.5.2

Please update conda by running

    $ conda update -n base -c defaults conda

## Package Plan ##

environment location: /home/codio/anaconda3/envs/update-env

added / updated specs:
- matplotlib
- requests
- scipy

The following packages will be downloaded:
```

package	build	
-----	-----	-----
_openmp_mutex-5.1	1_gnu	21 KB
brotli-1.0.9	h5eee18b_7	18 KB
brotli-bin-1.0.9	h5eee18b_7	19 KB
brotlipy-0.7.0	py311h5eee18b_1002	307 KB
ca-certificates-2023.05.30	h06a4308_0	120 KB
certifi-2023.7.22	py311h06a4308_0	154 KB
cffi-1.15.1	py311h5eee18b_3	283 KB
contourpy-1.0.5	py311hdb19cb5_0	212 KB
cryptography-41.0.2	py311h22a60cf_0	2.0 MB
expat-2.4.9	h6a678d5_0	156 KB
fontconfig-2.14.1	h52c9d5c_1	281 KB
freetype-2.12.1	h4a9f257_0	626 KB
giflib-5.2.1	h5eee18b_3	80 KB
glib-2.69.1	he621ea3_2	1.9 MB
gst-plugins-base-1.14.1	h6a678d5_1	2.2 MB
gststreamer-1.14.1	h5eee18b_1	1.7 MB
idna-3.4	py311h06a4308_0	96 KB
intel-openmp-2023.1.0	hdb19cb5_46305	17.1 MB
jpeg-9e	h5eee18b_1	262 KB
kiwisolver-1.4.4	py311h6a678d5_0	70 KB
krb5-1.20.1	h143b758_1	1.3 MB
ld_impl_linux-64-2.38	h1181459_1	654 KB

Updating Packages

Updating Specific Packages

Click the button below to setup the `update-env` environment and install packages.

SETUP ENVIRONMENT

Once the environment is ready to go, activate it.

conda activate update-env

Conda uses the `update` command to update a particular package. However, Conda does not update the package to the latest version. Instead, it updates the package to the latest version that is compatible with all of the other packages in the environment. Update `scipy` with the following command.

conda update scipy

Updating Conda

You can also specify several packages to be updated all at once. Use a space to separate each package. The command below updates `matplotlib` and the `requests` packages.

conda update matplotlib requests

Try these variations:

Update `matplotlib` and `requests` in a single command.

conda update matplotlib requests

Update the `python-twitter` package in the `learning-conda` environment.

conda update python-twitter --name learning-conda

Why is there an error?

Update all of the packages listed in a file with the `--file` flag.

conda update --file to-be-updated.txt

What is happening?

Updating All of the Packages

Conda can update all of the packages in a virtual environment with the `--all` flag.

conda update --all

Try this variation:

Update all of the packages in the `learning-conda` environment.

conda update --all --name learning-conda

Reading Question

Fill in the blank with either True or False.

False

 - The update command always updates a package to its newest version.

False.

 Conda looks to upgrade a package to the newest version that works with all of the other dependencies. This may mean that Conda cannot use the latest version as it causes a problem with another installed package.

Check It!
