Learning Objectives: Conda

Learners will be able to...

- Define and install Conda
- Define the base virtual environment
- Activate and deactivate a virtual environment
- Create a virtual environment with a specified name
- Add and remove packages with Conda and `pip`
- Create a requirements file that includes all packages
- Update packages in a virtual environment
- Build a package for distribution

Make Sure You Know

You are familiar with `pip` and virtual environments. You can work with command line utilities like `grep`.

Limitations

The material only talks about building a package in the most basic way. No hands-on work is done for building a package for `conda-forge`; it is only discussed in a high-level manner.
