Lab Challenge

Lab Challenge

Problem

Create and activate the `lab-challenge` virtual environment with 3.10.4 as the Python version.

Expected Output

Once your virtual environment is set up, run the following commands in the terminal:

```
conda activate lab-challenge
conda list
```

You should see `lab-challenge` in parentheses at the beginning of the prompt, which means the environment is active.

```
(lab-challenge) codio@janetoption-torchhydro:~/workspace$
```

Among the list of installed packages, you should see Python version 3.10.4.

```
python          3.10.4          h12debd9_0
```

Submit your code for evaluation.

The correct Conda commands are:

To create the `lab-challenge` virtual environment with Python version 3.10.4, use the following command:

```
conda create --name lab-challenge python=3.10.4 -y
```

- Use `create` to create a new virtual environment
- The `--name` flag is used to give a name to the environment
- Then specify the package (`python`) and version number (`=3.10.4`) to install that package with the exact version
- `-y` is not required but it keeps you skip the confirmation

Check It!

LAST RUN on 7/25/2023, 1:27:34 PM

Check 1 passed

Check 2 passed

Mark as Completed
