Guide

Collapse

Coding Exercise 1

Coding Exercise 1

Activate the virtual environment `exercisel` for this coding exercise.

conda activate exercisel

Problem

You are currently in the `ex1` directory, which contains the script `exercisel.py`. The Pyinstaller is already installed in the virtual environment. Convert the Python script `exercisel.py` into an executable file using the **one-folder** approach.

Expected Output

The bundling process should create the directory `exercisel` which is inside the `dist` directory. List the contents of `exercisel` with the following command.

ls dist/exercisel

You should see a collection of files, chief among them the `exercisel` executable. The output looks something like this:

base_library.zip libbz2.so.1.0 lib-dynload libpython3.10.so.1.0
exercisel libcrypto.so.3 liblzma.so.5 libz.so.1

Next, run the `exercisel` executable.

./dist/exercisel/exercisel

You should see the following output:

Hello from Coding Exercise 1

Submit your code for evaluation.

The terminal comman to solve this problem is:

pyinstaller exercisel.py

By default, Pyinstaller users the one-folder approach, so there is nothing you need to add to signify this.

Check It!

LAST RUN on 7/26/2023, 2:21:51 AM
Check 1 passed
Check 2 passed
