

## Formative Assessment 2

### Formative Assessment

Rearrange the blocks below to create a simple Flask app that displays the text `Hello from Flask` when you load the webpage.

**Important**, the blocks must be properly indented when appropriate.

```
from flask import Flask
```

```
app = Flask(__name__)
```

```
@app.route('/')
```

```
def hello_msg():
```

```
    return 'Hello from Flask'
```

```
if __name__ == '__main__':
```

```
    app.run()
```

The correct answer is:

```
from flask import Flask

app = Flask(__name__)

@app.route('/')
def hello_msg():
    return 'Hello from Flask'

if __name__ == '__main__':
    app.run()
```

- Start by importing `Flask`, then create the Flask app. Use the decorator to route the root URL (`/`) to the function `hello_msg`. In this function, simply return the string `'Hello from Flask'`. Finally, check if the script is being run directly with a conditional and run the Flask app if true.

Check It!
