Formative Assessment 1

Formative Assessment

What is wrong with the following line of code?

```
age = Label(text=27)
```

- ☐ For text, use the `Text` widget instead of `Label`.
- ☐ Label widgets are instantiated with a lowercase "l".
- ☐ Trick question, there is nothing wrong with the code.
- ☒ Label widgets can contain only strings.

Label widgets can only contain a string. If you want to store a numeric value in a label, first typecast it as a string.

```
age = Label(text=str(27))
```

Check It!
