Learning Objectives: Modules and Packages

Learners will be able to...

- Define a module
- Differentiate between a module and a package
- Import a package and its modules
- Describe the importance of `__init__.py`
- Use packages from the standard library

1

Make Sure You Know

You are familiar with writing and importing modules. You also have experience writing functions and classes.

Limitations

We will only be working with modules written in Python.
Subpackages are referenced, but not covered in-depth.
