1. Which of the following steps are necessary when saving class labels in Keras?

1 / 1 point

- ☐ Manually write class labels to a text file
- ☐ Employ a Keras utility function to save labels
- ☒ Extract class labels from the dataset

✔

Correct

Correct! Extracting class labels from the dataset is a necessary step.

- ☒ Use a dictionary to map class indices to class labels

✔

Correct

Correct! A dictionary mapping class indices to class labels is essential.

- ☒ Save class labels in the same order as used during training

✔

Correct

Correct! Maintaining the order of labels as used during training is crucial.

2. Which file format is typically used when saving a Keras model using model.save?

1 / 1 point

- ☐ .pkl
- ☐ .json
- ☐ .ckpt
- ☒ .h5

✔

Correct

Correct! The .h5 format is commonly used when saving Keras models.

3. In Keras, which function is used to make a prediction after loading a model?

1 / 1 point

- ☐ model.summary()
- ☒ model.predict()
- ☐ model.evaluate()
- ☐ model.fit()

✔

Correct

Correct! The 'model.predict()' function is used to make predictions after loading a model.

4. What command would you use to load a saved Keras model from a file named 'model.h5'?

1 / 1 point

- ☐ keras.models.open('model.h5')
- ☐ keras.load('model.h5')
- ☐ keras.models.save_model('model.h5')
- ☒ keras.models.load_model('model.h5')

✔

Correct

Correct! This command loads a saved Keras model from the specified file.

5. Which technique involves adding extra pixels around the borders of an image to improve model accuracy?

1 / 1 point

- ☐ Pooling
- ☒ Padding
- ☐ Dropout
- ☐ Batch normalization

✔

Correct

Correct! Padding adds extra pixels around the borders of an image, which can help retain important features and improve model accuracy.
