1. Which file format is typically used when saving a Keras model using model.save?

1 / 1 point

- ☐ .json
- ☐ .pkl
- ☐ .ckpt
- ☒ .h5

✔ **Correct**
Correct! The .h5 format is commonly used when saving Keras models.

2. What is the primary method for saving a Keras model?

1 / 1 point

- ☐ model.persist
- ☒ model.save
- ☐ model.archive
- ☐ model.store

✔ **Correct**
Correct! The primary method for saving a Keras model is using model.save.

3. Which of the following steps are necessary to load an image for prediction in Keras?

0.6 / 1 point

✔ ☒ Resize the image to match the input shape of the model

✔ **Correct**
Correct! Resizing the image ensures that it matches the input shape expected by the model.

☐ Compile the model again with new parameters

☐ Normalize the pixel values

✔ ☒ Convert the image to a numpy array

✔ **Correct**
Correct! Converting the image to a numpy array is necessary for Keras to process it.

☐ Import the image processing library

You didn't select all the correct answers

4. What are some benefits of using Jupyter notebooks for writing prediction code?

1 / 1 point

✔ ☒ Interactive code execution

✔ **Correct**
Correct! Jupyter notebooks allow for interactive code execution, which is useful for testing and debugging.

✔ ☒ Visualization of data and results

✔ **Correct**
Correct! Jupyter notebooks are excellent for visualizing data and results directly within the notebook.

☐ Real-time collaboration with team members

✔ ☒ Ease of sharing code and results

✔ **Correct**
Correct! Jupyter notebooks make it easy to share code and results with others.

☐ Built-in version control

5. Select the techniques that can be used to improve model accuracy by adjusting the number of filters.

1 / 1 point

✔ ☒ Using fewer filters to prevent overfitting

✔ **Correct**
Correct! Using fewer filters can help prevent overfitting, especially in simpler datasets.

☐ Applying dropout to reduce overfitting

☐ Changing the activation function

✔ ☒ Adding more filters to capture complex features

✔ **Correct**
Correct! Adding more filters can help capture complex features and improve model accuracy.

☐ Implementing early stopping during training
