Your latest: 100% • Your highest: 100% • To pass you need at least 50%. We keep your highest score.

1.

Which actions can optimize the performance of your deep learning model training when using a GPU?

1 / 1 point

☐ Disable dropout layers.

☒ Ensure your dataset is preprocessed and augmented.

✔ Correct

Correct! Preprocessing and augmenting your dataset can lead to better model performance and faster training.

☐ Use smaller neural network architectures.

☒ Increase the batch size.

✔ Correct

Correct! Increasing the batch size can improve GPU utilization and training speed.

☒ Use mixed precision training.

✔ Correct

Correct! Mixed precision training can accelerate training and reduce memory usage.

2.

Which of the following methods is used to mount Google Drive in a Colab notebook for dataset access?

1 / 1 point

☐ Running a shell command to download the dataset from Google Drive.

☒ Using the code from google.colab import drive; drive.mount('/content/drive')

☐ Manually uploading files through the Colab interface.

☐ Using the code import gdrive; gdrive.mount('/content/gdrive')

✔ Correct

Correct! This code mounts Google Drive in a Colab notebook, allowing you to access datasets stored there.

3.

What is the primary benefit of using a GPU for deep learning training?

1 / 1 point

☒ GPUs have a higher number of cores that allow for parallel processing.

☐ GPUs are cheaper to use than CPUs.

☐ GPUs have more memory than CPUs.

☐ GPUs consume less power than CPUs.

✔ Correct

Correct! The high number of cores in GPUs enables parallel processing, which is crucial for efficiently training deep learning models.

4.

What are important steps to run predictions on a trained model in a Google Colab notebook?

1 / 1 point

☒ Loading the model from the saved file

✔ Correct

Correct! Loading the model is necessary before you can run predictions.

☒ Connecting to the internet

✔ Correct

Correct! An internet connection is often required to access Colab and any online datasets.

☐ Re-training the entire model

☒ Preprocessing the input data

✔ Correct

Correct! Input data must be preprocessed to match the input format expected by the model.

☐ Updating Jupyter notebook

5.

When performing multiclass classification with Keras, which activation function is typically used in the output layer?

1 / 1 point

☐ A. ReLU

☐ D. Tanh

☒ C. Softmax

☐ B. Sigmoid

✔ Correct

Correct! The softmax activation function is used in the output layer for multiclass classification to generate probability distributions for each class.
