The Apache Tez project is aimed at building an application framework which allows for a complex directed-acyclic-graph of tasks for processing data. It is currently built atop [Apache Hadoop YARN](#)

The 2 main design themes for Tez are:

- **Empowering end users by:**
 - Expressive dataflow definition APIs
 - Flexible Input-Processor-Output runtime model
 - Data type agnostic
 - Simplifying deployment
- **Execution Performance**
 - Performance gains over Map Reduce
 - Optimal resource management
 - Plan reconfiguration at runtime
 - Dynamic physical data flow decisions

By allowing projects like Apache Hive and Apache Pig to run a complex DAG of tasks, Tez can be used to process data, that earlier took multiple MR jobs, now in a single Tez job as shown below.

Pig/Hive - MR

Pig/Hive - Tez
