Working with Yelp dataset sample, from Lesson 2, video 2, Other Pig Commands

In the graded quiz assignment we will first run the script that was presented the video, and then we will add commands to answer a few more questions, The details for adding commands are in the quiz. Here is the comments for running the attached pig script.

### 1. Check out the Yelp dataset in your cloudera VM:

Try this in Unix

```
unix > head -1  
/usr/lib/hue/apps/search/examples/collections/solr_configs_yelp_demo/index_data.csv
```

(it returns the header row)

### 2. Copy the dataset into HDFS if you are going to run pig -x mapreduce

```
unix> hdfs dfs -copyFromLocal  
/usr/lib/hue/apps/search/examples/collections/solr_configs_yelp_demo/index_data.csv  
/user/cloudera/input/yelp_data.csv
```

### 3. At unix prompt enter:

```
unix > pig -x local or pig -x mapreduce
```

### 4. Pig commands, after any command you could try

-- DESCRIBE relation-name-you-use to see what the schema that Pig is using for the relation.

-- It is very useful as you debug and develop scripts, especially to get the field referencing

correct

Pig\_script\_4yelpdata.pig (<https://d3c33hcgiwev3.cloud...>)
