For Spark DataFrames to work correctly and access tables stored in Hive, it is necessary to copy the Hive configuration file hive-site.xml to the spark configuration folder:

```
Lesson 1: Introduction to Spark  
DataFrames  
sudo cp /etc/hive/conf.dist/hive-site.xml /usr/lib/spark/conf/
```

Lesson 1: Introduction to Spark
DataFrames
Check this is working by opening the PySpark shell and executing:

```
sqlCtx.createDataFrame([("somekey", 1)])
```

● Setup PySpark for DataFrames
This should print logging messages and then:

```
(/learn/bigdata-analytics/supplement/tyH3p/setup-pyspark-for-dataframes)  
Out[1]: DataFrame[3: string, _2: bigint]
```
